教學內容	近年來，居家照顧已成爲早期療育主要服務項目之一。醫學研究均指出早期介入對高危險群的嬰幼兒而言其預後效果顯著，身爲嬰幼兒照護工作者，若能對特殊幼兒的早期發現與適切介入，對兒童本身有極大的助益。	Syllabus	In the recent years, home-based intervention for infants and children with disabilities has expaned and proliferated. Advances in medical care and a framatic reduction of mortality rates for extremely premature and low-birth-weight infants have increased the number of chilfren at risk for developmental disabilities. For the teacher or nursery, service delivery in the home environment appears to reduce the stress of frequent visits to a center-based program, particularly for large families and families with more than one disabled child. Home-based services also provide consistent, and may be preferred by families because they allow regular, one-on-one communication with service providers.
