教學內容	Through working on two projects the course aims at helping the students to understand how a professional UK designer would work; to understand his thinking process and working method. Project 1 -'Designing a container for a drink' touches on how new product is conceived through observation, research, to how to design for use and production. Project 2 - 'Tool Story' is about understanding the design requirement when given a task to design a simple tool. The aim is for the students to discover how to establish a working brief, come up with some early ideas, and merge the two into a project proposal.
