教學內容	此課程探討變異數分析與實驗設計之理論及應用，內容包括隨機化、完全/不完全區隔設計、二/三水準實驗設計、混合設計、以及田口式實驗設計。課程重點在於各種實驗設計之效率與可取得資訊之比較。透過一系列的案例演練來增進實驗設計分析的技巧，並以專題報告的方式來提昇學生的溝通及寫作能力。	Syllabus	The course presents the principles and practice of ANOVA and Design of Experiments, including randomization, complete and incomplete block design, two/three level factorial design, mixture design, and Taguchi's method. The focus of the course is on the comparisons of different experimental designs based on the efficiency and the information gathered/missed. A series of design exercises provides a key bridge between the DOE theory and the application of software to an open-ended DOE problem. Communication skills are developed with both written and oral presentation.
