朝陽科技大學 096學年度第2學期教學大綱
Mechanics of Material 材料力學

當期課號	1466	Course Number	1466
授課教師	干裕成	Instructor	KAN,YU CHENG
中文課名	材料力學	Course Name	Mechanics of Material
開課單位	營建工程系(四日)一B	Department	
修習別	必修	Required/Elective	Required
學分數	3	Credits	3
課程目標	材料力學爲土木工程之重要基礎學科，舉凡土壤力學、鋼筋混凝土學、結構學.....等，均需具備良好的材料力學觀念，本課程旨在建立營建系學生所需具備之材料力學基礎，主要包括拉力、壓力、扭力、剪力、彎曲力矩、應力、應變、撓度及柱等。	Objectives	Mechanics of materials is a basic subject in construction engineering. This course provides an opportunity to accomplish two things: first, to teach students a basic engineering subject and, second, to develop their analytical and problem-solving abilities. The main topics of this course include the analysis and design of structure members subjected to axial loads, torsion, shear and bending, as well as such fundamental concepts as stress, strain, elastic and inelastic behavior. Other topics of general interest are the transformations of stress and strain, deflection of beams and behavior of columns, and so on.
教材	課堂授課及定期測驗	Teaching Materials	Recitation and quiz
成績評量方式	1、期中考：25分 2、期末考：25分 3、平常考：30分 3、作業與出席成績：20分	Grading	Quizes(30%), Midterm(25%), Final exam(25%), Homework and other performance(20%)
